

Problem Statement: AI Talent Intelligence & Recruitment Platform

Theme

AI-Powered Talent Discovery, Verification & Recruitment Ecosystem

Problem Overview

Traditional recruitment platforms primarily rely on resumes, keyword matching, and manual screening processes. This approach often fails to identify genuinely skilled candidates and creates inefficiencies for recruiters.

Thousands of students and developers participate in hackathons, build innovative projects, contribute to open source, and demonstrate strong technical capabilities, yet much of this valuable data remains unused in the hiring process.

Recruiters spend significant time filtering applications, validating skills, conducting initial assessments, and identifying suitable candidates. At the same time, candidates struggle to showcase their real abilities beyond traditional resumes.

There is a need for an intelligent platform that can transform technical achievements, project contributions, presentations, and hackathon performance into a trusted hiring ecosystem.

Challenge Statement

Build an **AI-powered Talent Intelligence and Recruitment Platform** that enables organizations to discover, verify, evaluate, and hire candidates based on real skills, technical contributions, hackathon performance, presentations, and AI-driven assessments rather than relying solely on resumes.

The platform should create a seamless ecosystem connecting candidates, recruiters, communities, and hackathons into a unified hiring pipeline.

Objectives

For Candidates

- Create a verified digital talent identity.
- Showcase real technical capabilities.
- Receive personalized career recommendations.
- Improve visibility to recruiters.

For Recruiters

- Reduce hiring time and screening effort.
 - Discover hidden talent beyond resumes.
 - Verify candidate skills automatically.
 - Improve hiring quality using AI.
-

Mandatory Modules & Deliverables

Candidate Intelligence Platform (Mandatory)

Features Required

AI Talent Profile Engine

Automatically generate profiles using:

- Resume data
- GitHub contributions
- LinkedIn information
- Certifications
- Hackathon participation
- Open-source activities
- Community contributions

AI Talent Score™

Generate an overall talent score based on:

- Coding Ability
- Project Quality
- Leadership
- Problem Solving
- Innovation
- Community Participation
- Technical Consistency

Candidate Dashboard

Must include:

- Talent Analytics
- Skill Reports
- Job Recommendations
- Career Insights

- Verified Skill Badges

AI Resume & Portfolio Builder

Generate:

- ATS-Friendly Resume
- Dynamic Portfolio Website
- Cover Letters
- Company-Specific Resume Optimization

AI Career Guidance System

Provide:

- Skill Gap Analysis
- Recommended Certifications
- Career Roadmaps
- Salary Predictions
- Learning Recommendations

AI Recruitment Platform (Mandatory)

Features Required

Recruiter Dashboard

Provide:

- Candidate Discovery
- AI Shortlisting
- Hiring Analytics
- Recruitment Pipeline Management

AI Job Matching Engine

Generate:

- Candidate Match Percentage
- Skill Similarity Analysis
- Cultural Fit Analysis
- Project Relevance Score

Recruiter AI Copilot

Natural language search examples:

- Find top AI developers from Delhi.
 - Find React developers with hackathon experience.
 - Find candidates skilled in GenAI and Open Source.
-

AI Assessment & Verification System (Mandatory)

Features Required

AI Skill Verification Engine

Include:

- Coding Assessments
- MCQ Evaluations
- Project Analysis
- GitHub Repository Analysis

AI Interview Agent

Conduct:

- Technical Interviews
- Behavioral Assessments
- Communication Evaluation

Generate reports including:

- Confidence Score
- Technical Rating
- Communication Rating
- Hiring Recommendation

Team Contribution Analytics

Analyze:

- GitHub Commits
 - Pull Requests
 - Task Contributions
 - Submission History
-

AI PPT Analyzer & Presentation Intelligence (Mandatory)

Features Required

Develop an AI system capable of analyzing project presentations and pitch decks. The

system should:

- Analyze uploaded PPT/PDF presentations.
- Evaluate problem understanding and solution clarity.
- Score business impact and innovation.
- Analyze technical depth and feasibility.
- Detect AI-generated or copied content.
- Generate presentation summaries automatically.
- Provide improvement suggestions.

Generate Reports Including:

- Innovation Score
- Technical Feasibility Score
- Presentation Quality Score
- Business Potential Score
- Overall Pitch Score
- AI-generated Feedback & Recommendations

This module can be used by recruiters, judges, and investors to quickly assess candidate ideas and projects.

Hackathon-to-Hiring Pipeline (Mandatory)

Features Required

- Hackathon Performance Tracking
- Winner Analytics
- Team Rankings
- Project Evaluation
- Innovation Scoring
- Recruiter Access to Top Performers

The platform should enable organizations to directly hire talent from hackathons and developer communities.

Trust & Fraud Prevention System (Mandatory)

Features Required

Develop mechanisms to detect:

- Fake Certificates
- Fake Projects
- AI-Generated Resumes
- Duplicate Profiles
- Plagiarized

Submissions Generate:

- Candidate Authenticity Score
- Fraud Risk Reports

Advanced AI Features (Bonus)

Teams may additionally implement:

Multi-Agent AI Architecture

Examples:

- Resume Screening Agent
- Skill Verification Agent
- Interview Agent
- Career Guidance Agent
- Recruiter Assistant Agent
- Fraud Detection Agent
- Presentation Evaluation Agent

Additional Bonus Features

- Campus Talent Heatmaps
 - Community Reputation Score
 - Graph-Based Talent Intelligence Engine
 - Salary Prediction Models
 - Predictive Hiring Analytics
 - Open Source Reputation System
-

Expected Deliverables

Every team must submit:

Mandatory Deliverables

1. Candidate Dashboard
2. Recruiter Dashboard
3. AI Talent Profile Engine
4. AI Talent Score System
5. AI Job Matching Engine
6. AI Skill Verification System
7. AI Interview Agent
8. Team Contribution Analytics
9. AI PPT Analyzer
10. Hackathon-to-Hiring Pipeline
11. Fraud Detection System
12. Hiring Analytics Dashboard

Evaluation Criteria

Criteria	Weightage
Innovation & Originality	20%
AI Implementation	20%
Technical Complexity	15%
User Experience	15%
Scalability & Architecture	15%
Business Impact	15%

Vision Statement

Create an AI-native talent infrastructure that enables organizations to hire candidates based on verified skills, real contributions, presentations, and demonstrated technical excellence instead of relying solely on traditional resumes.
